

# What Your Score Means:

*THE HIGHER THE BETTER!*

**10,000 to 19,000:** About half the US population scores in this range. These are people who do not eat many fruits or vegetables, and/or their nutritional supplementation is not working (is not being absorbed by the body and/or the product does not contain what the label says it does).

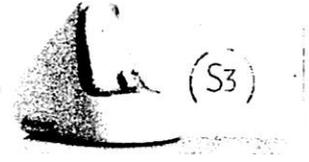

**20,000 to 29,000:** People in this category are typically eating a couple of daily servings of fruits or vegetables or taking some supplemental antioxidants. The nutritional supplements may or may not be working at this level.

**30,000 to 39,000:** Healthy diets start here, but may not be enough for long-term disease prevention. Typically people here are eating 3 to 5 servings of fruits and/or vegetables per day, and may or may not be supplementing.

**40,000 to 49,000:** Everyone is advised to strive for this level or higher. LifePak supplementation will allow most people to attain this level or higher.

**50,000 +:** Only about 1% of people attain this level of anti-oxidant protection in their bodies. A program of healthy eating and LifePak supplementation can allow one to reach this level of optimal protection.

# S3 Scanner Results

**“The amount of antioxidants that you maintain in your body is directly proportional to how long you will live.”**

**RICHARD CUTLER, MD  
DIRECTOR OF ANTI-AGING RESEARCH,  
NATIONAL INSTITUTE OF HEALTH (NIH)**

|                    |   |                         |
|--------------------|---|-------------------------|
| 50,000 to 100,000+ | = | Optimal                 |
| 40,000 to 49,000   | = | Fair                    |
| 30,000 to 39,000   | = | Nutritionally Deficient |
| 20,000 to 29,000   | = | Cautionary Zone         |
| 10,000 to 19,000   | = | Dangerously Low         |

**A - 50,000-100,000+: Optimal** - Everyone is advised to strive for this level or higher. A program of healthy eating and LifePak/g3 supplementation can allow one to reach this level of optimal cellular protection.

**B - 40,000-49,000: Fair** - Healthy diets start here, but may not be enough for long-term disease protection. LifePak/g3 supplementation will allow most people to attain this level or higher.

**C - 30,000-39,000: Nutritionally Deficient** - People in this category are typically eating 4-5 servings of fruits or vegetables per day, and may or may not be supplementing. This level is not sufficient for long-term protection.

**D- 20,000-29,000: Cautionary Zone** - People in this category are typically eating a couple of servings of fruits or vegetables per day, and may or may not be supplementing. The supplements do not appear to be working effectively at this level.

**F - 10,000-19,000: Dangerously Low** - About half of the US Population scores in this range and they do not eat many fruits or vegetables and/or their nutritional supplementation is not working (ie. not being absorbed by the body and/or the product does not contain what the label says it does.)
